DAILY NUTRITION

Balanced nutrition is made up of these **5 CRITICAL COMPONENTS**:

Do your numbers add up?

Your daily diet should consist of **40%** carbohydrates, **30%** protein, and up to **30%** healthy fats.

Getting **BALANCED NUTRITION** can have many positive benefits...

as well as supporting normal levels of blood fat, blood sugar and blood pressure (that already are within normal range).

Protein

● Feeling tired or weak? Your protein levels might be running low.

Carbohydrates

● Need more pep in your step? Make sure you're consuming healthy carbohydrates. They'll help you get through your busy day with energy and stamina.

Fat

● Healthy fats (Omega 3s) are important for your heart, brain, and joint functions.

Vitamins & Minerals

■ Vitamins and minerals aid in cell function, convert macronutrients into energy, and help support the immune system.

Phytonutrients

Produced by plants, phytonutrients protect us from oxidative stress.

Replenishing the water you lose is critical. Dehydration can lead to fatigue, muscle cramps, constipation, migraines, and dry skin.
